SURVEY OVERVIEW AND SAMPLING METHOD

Date: 23 May – 2 June 2017 (6:15 pm - 10:15 pm)

Polling Agency: Telephone Survey Research Laboratory, Hong Kong Institute of Asia-Pacific Studies,
The Chinese University of Hong Kong

Target Respondents: Hong Kong Citizens aged 18 or above speaking Cantonese or Mandarin with a
landline telephone

Survey Method: Random sampling was adopted using CATI (Computer-Assisted Telephone Interview)
system. 1,004 respondents aged 18 or above speaking Cantonese or Mandarin were interviewed.
Sampling error is within $\pm 3.09\%$ at 95% confidence level and the response rate is 37.2%.

Weighting: To better represent the distribution of the Hong Kong population, all data were weighted
by the proportion of gender and age of people aged 18 or above (excluding foreign domestic helpers)
according to the mid-year population for 2017 released by the Census and Statistics Department. The
figures in this survey may not add up due to rounding errors and weighting.

Survey Results (Frequency and Percentage Distribution)
